

Part 3 – Component Investigation

Component	Function	Key specification
CPU	Processes instructions and controls the operations of the computer.	Clock speed (GHz) and number of cores
RAM	Temporarily stores data and programs.	Capacity (GB) and type (DDR4/DDR5)
Storage	Permanently stores files, software, and operating system data.	Capacity (GB/TB) and type (SSD/HDD)
Motherboard	Connects and allows communication between all computer components.	Socket type and chipset
Power Supply	Provides electrical power to all parts of the computer.	Wattage (W) and efficiency rating
Cooling	Prevents overheating by reducing heat inside the computer.	Cooling type (Air/Liquid) and fan size
